Symbifox

Your family, in order. Everyone keeps their own data.

Household accounts, children and both their parents, papers that expire, and an emergency card for the babysitter, in your Symbifox Personal instance.

The reality

What slips through in a family

Symbifox

Every account goes through one person

Adding the teen, resending a password: it all waits for someone with rights over everything, other people's data included.

A child only exists on one parent's side

Health records on one phone, papers in the other's drawer: the second parent sees nothing of what they should be keeping.

The passport expires at the worst time

A child's passport lasts five years and cannot be renewed. You find out while booking the trip, not six months ahead.

The babysitter lacks the essentials

Allergies, the doctor, who to call: a note on the fridge, if there is one, and never up to date.

The solution

A family run by more than one

Symbifox

1

A manager without the master key

Invites members and resends links. Cannot see or change anyone's data.

2

One child, two parents

Both keep their health and papers. The household sees the first name and birthday.

3

Everyone's papers

Private by default, shared on purpose, with a reminder before they expire.

4

An emergency card

Printed, or sent to the babysitter through a link that expires.

5

Leaving cuts no one off

An adult leaves with their records. No one cuts them off from their own.

The household's members

With sample data

Symbifox

Invite in one step

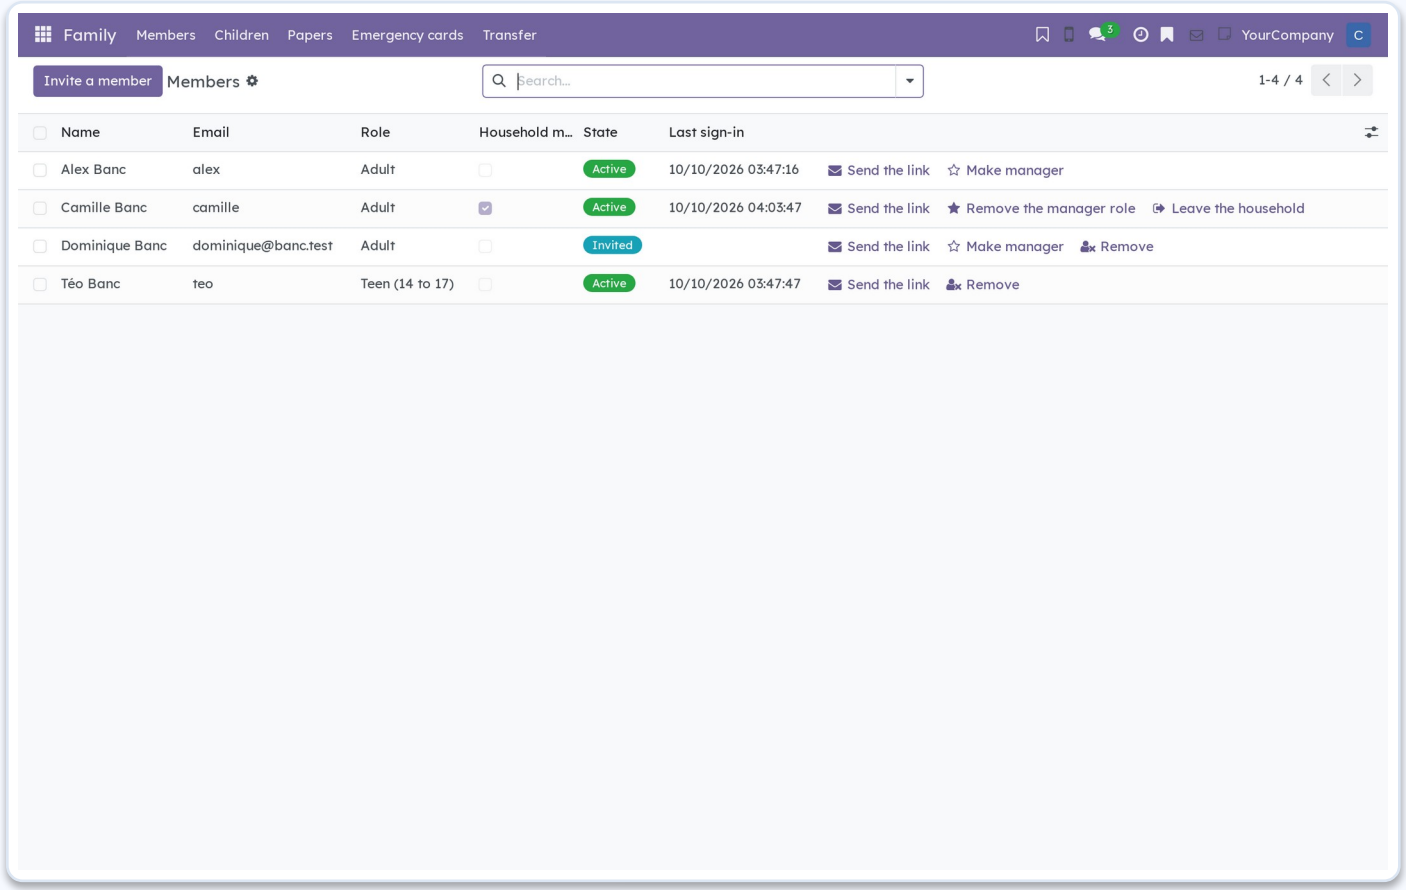

The invitation goes to the person's own address; they choose their password.

What the manager cannot do

Set a password, change an email, or remove an adult who has already signed in.

Ten accounts, no more

Adults and teens aged 14 to 17. Under 14, a parent follows the child.

One child, one record

With sample data

Symbifox

One or two named parents

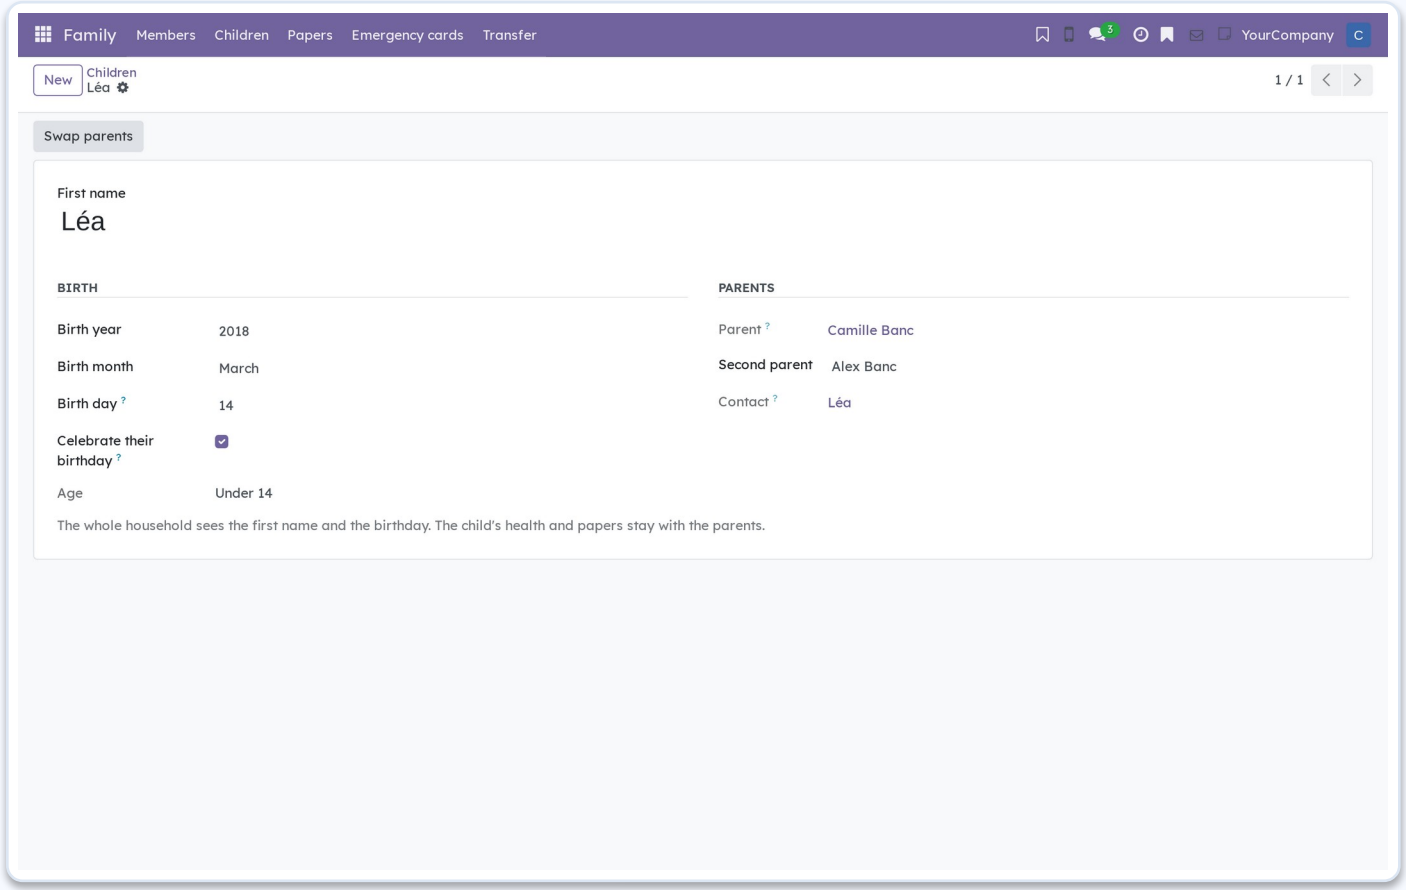

Whoever creates the record names the other parent. Both keep what is private.

The household sees what matters

First name and birthday, for the calendar and celebrations. Nothing about their health.

The same record in Healthy Fox

Health tracking follows both parents, and moves to the teen's account at 14.

Papers, before they expire

With sample data

Symbifox

Six months for a passport

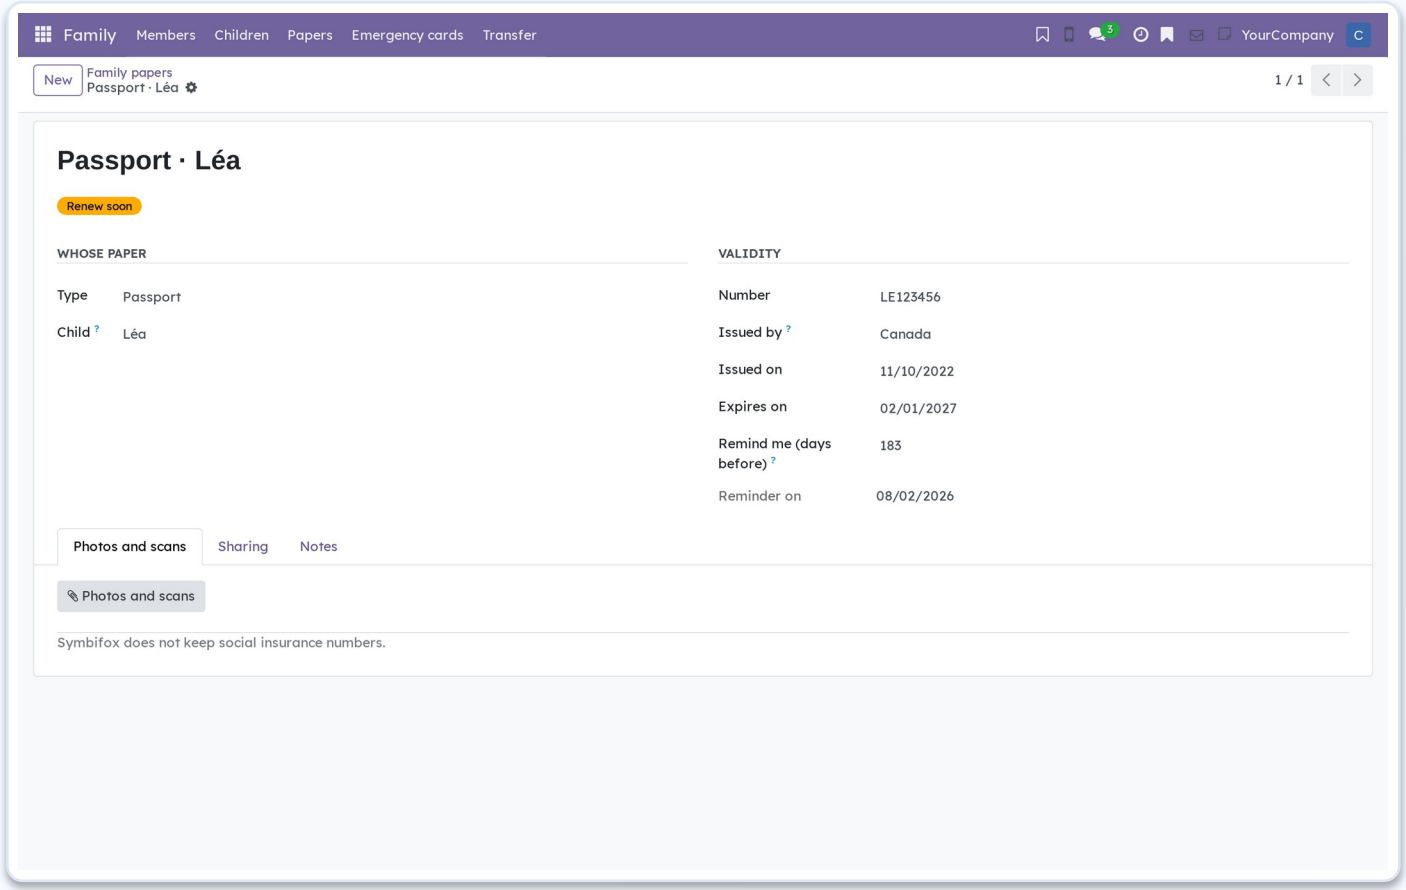

Many countries require that much validity at entry. The reminder comes in time.

A reminder that says no more

A private task for the paper's holders: the type and the person, never the number.

No SIN, ever

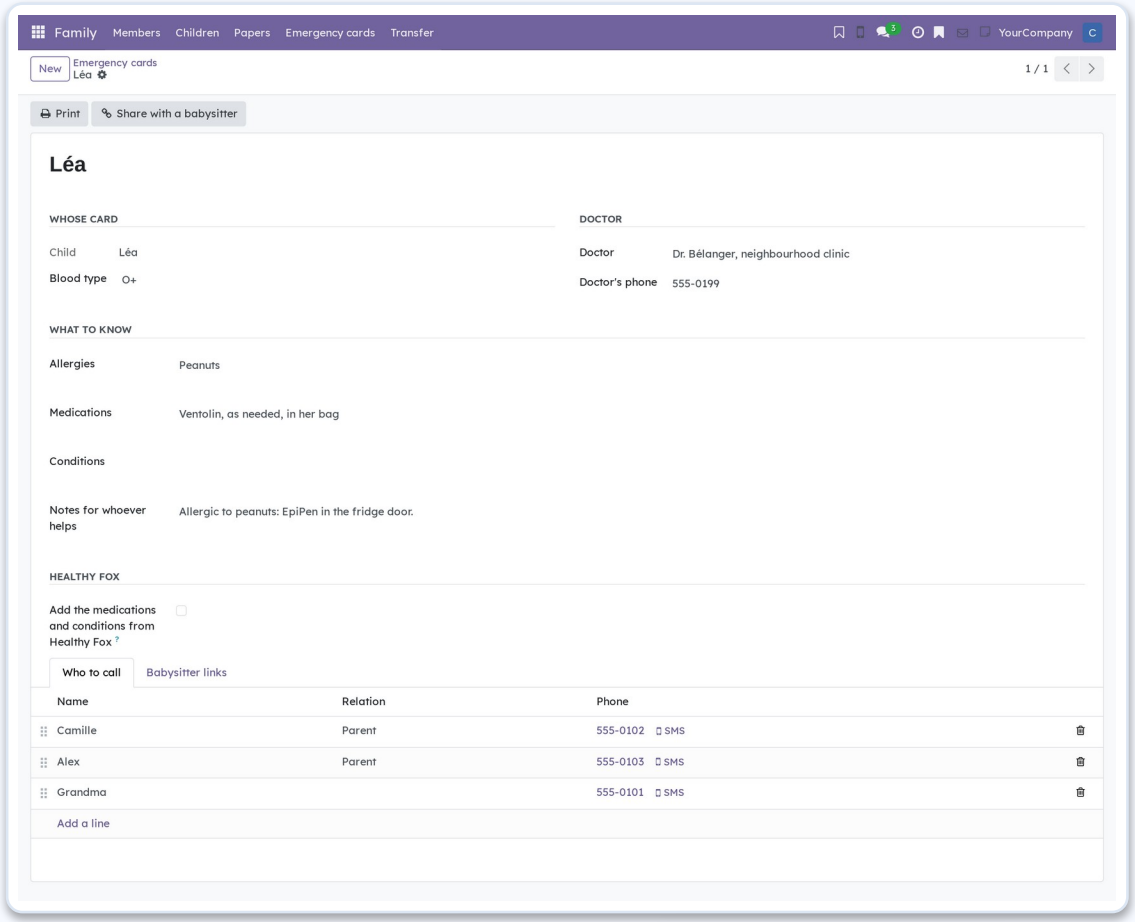

Symbifox refuses to keep a social insurance number, even one tucked into a note.

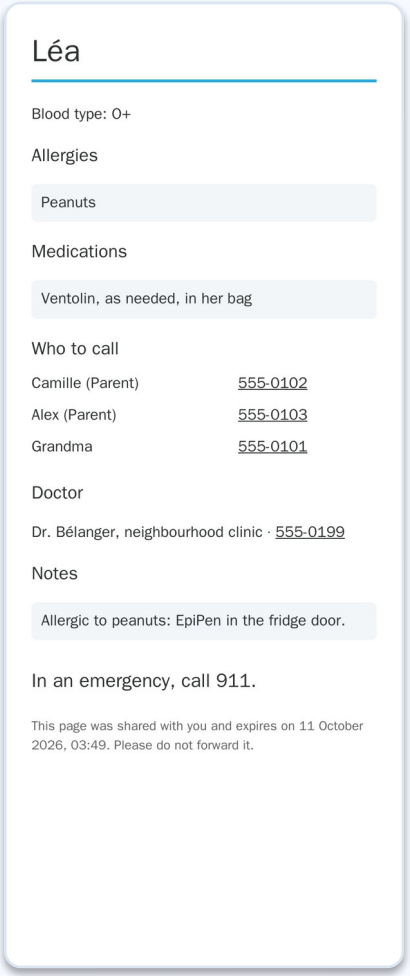

The card the babysitter reads

With sample data

Symbifox

In your household

On their phone

Everyone keeps what is theirs

A household instance, private data

Symbifox

By role

Manager

Invites, resends a link, removes a teen or an unused account. Nothing more.

Parents

Keep their child's health records, papers and emergency card.

Babysitter

Reads the card through an expiring link, with no account, and nothing else.

Built-in protections

Private papers

For their holder or the child's parents, shared read-only if you choose.

A link that expires

From 4 hours to 7 days, withdrawn in one click, every opening logged for you.

No one is cut off

An adult leaves by themselves with an export of their records, or on request with notice.

No administrator

No household member reads anyone else's private apps, managers included.

In short

1. **The household runs its accounts**
   Invite, resend a link, with no power over data
2. **Two parents for one child**
   Health, papers and emergency card kept by both
3. **Papers stop catching you out**
   A private reminder before expiry, six months for a passport
4. **The babysitter knows what to do**
   A printed card or a link that expires
5. **Everyone keeps what is theirs**
   Leaving cuts no one off from their records
