Symbifox

Your routes, run and proven.

Even where there's no signal.

Recurring rounds, stops in the right order, a record of every visit, sales from the truck and mileage, from the phone of the person on the road.

Odoo 18 module | Work Routes

symbifox.com | hello@symbifox.com

The reality

What gets lost on the road

Symbifox

The order is redone every morning

Whoever drives sorts the stops in their head, and the office can't tell who goes where, or when.

A visit leaves no trace

“Nobody was there”: with no time or note taken on site, a dispute comes down to one word against another.

Sales get copied out at night

Paper slips retyped at the office, cheques counted at the end: mistakes show up with the invoice, days later.

Basements have no signal

An app that needs a connection loses the mark made at the loading dock, or makes you do it again.

The solution

One route, handled end to end

Symbifox

1

Routes that come back

Days are created ahead of time, every week or every other week.

2

The right order, worked out

Time windows kept, distance and times planned by an engine you host yourself.

3

Arrival and departure at each stop

“I’m here”, then done, absent or postponed: time on site is measured, even with no signal.

4

Selling from the truck

Invoice at the customer's price, deposits and payment recorded on the spot.

5

Mileage, claimed

The expense, the log and the hours come from the finished day.

The route, set up once

With sample data

Symbifox

Who, what, when

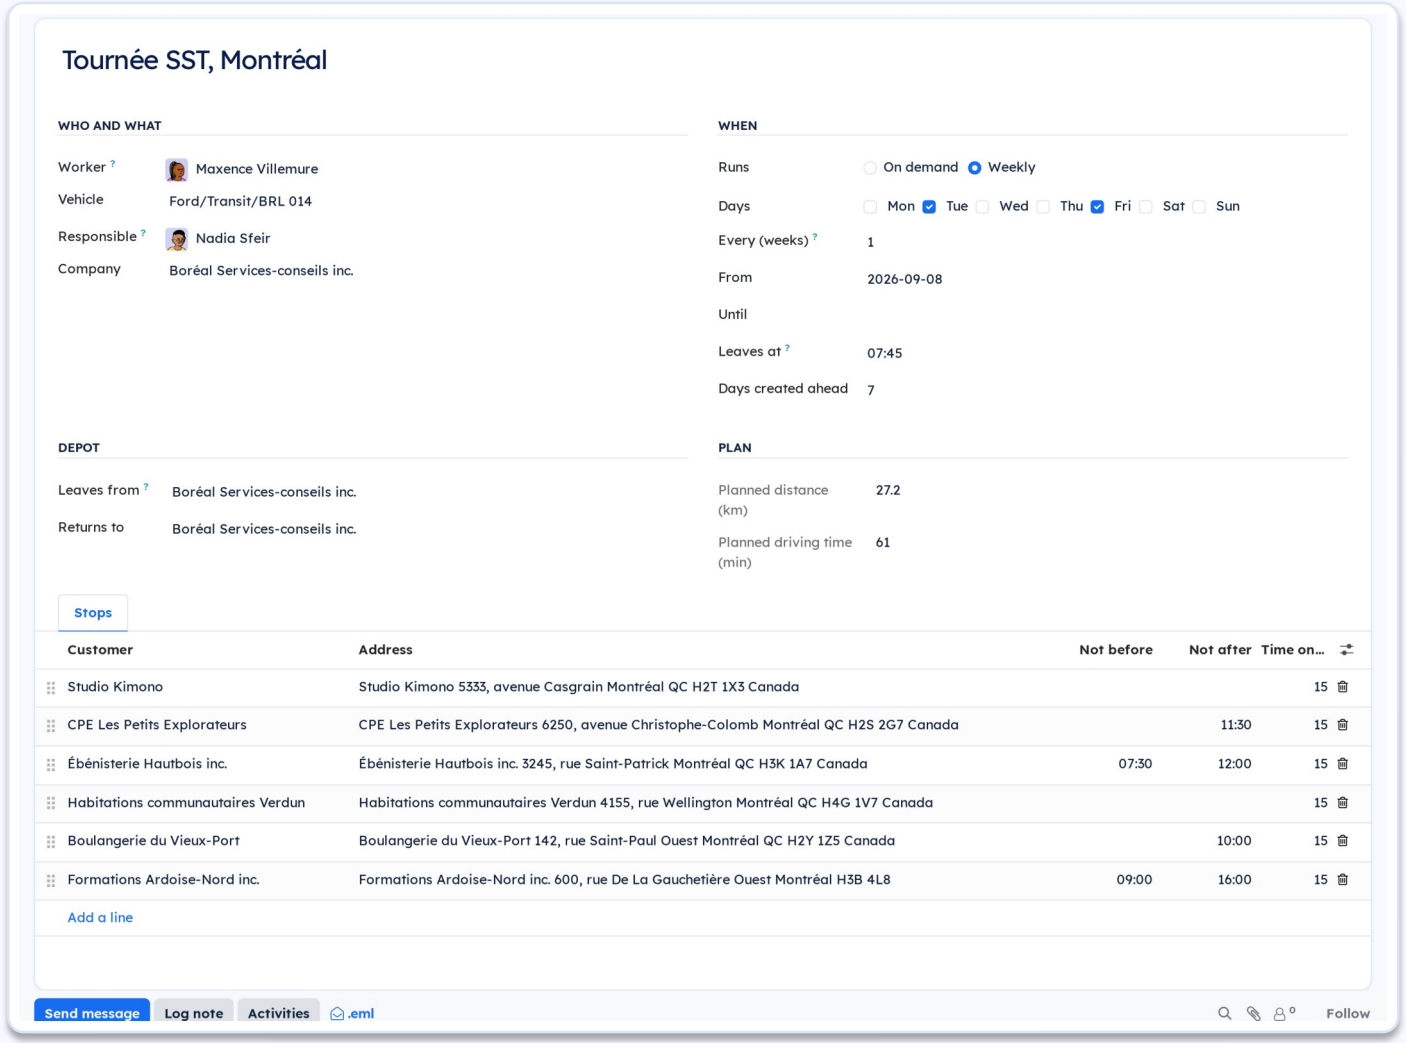

The person on the road, the vehicle, the days it runs and the time it leaves.

Time windows kept

“Not before 7:30”, “not after 10:00”: the computed order respects them.

Days ahead of time

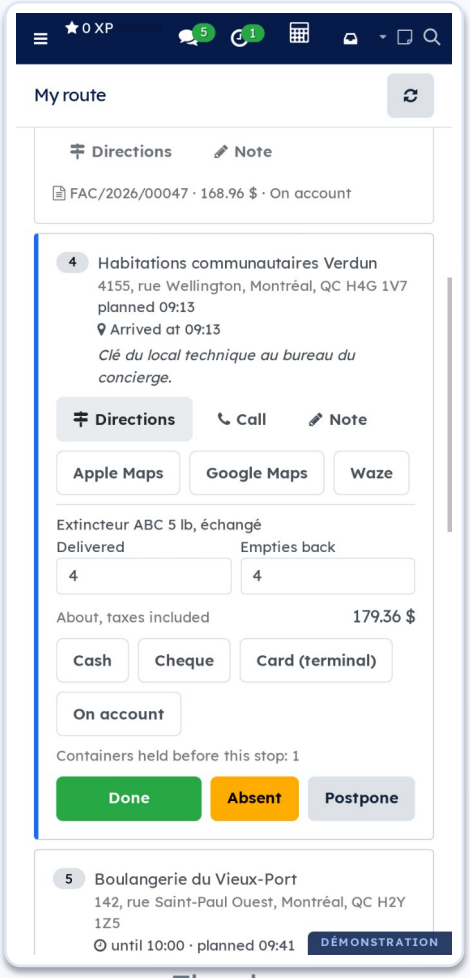

A week is created in advance. A day the office has edited is never overwritten.

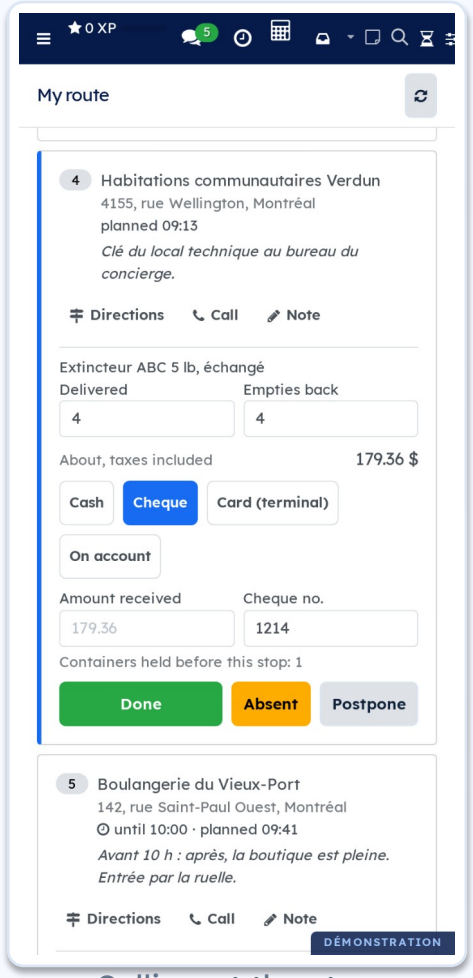

The phone, stop by stop

With sample data

Symbifox

The day

Selling at the stop

The day, from the office

Add a line

Arrival, departure, time on site and the note: the office follows the route without a phone call. A postponed stop moves to the next day.

The day on a map

With sample data

Symbifox

Stops in order

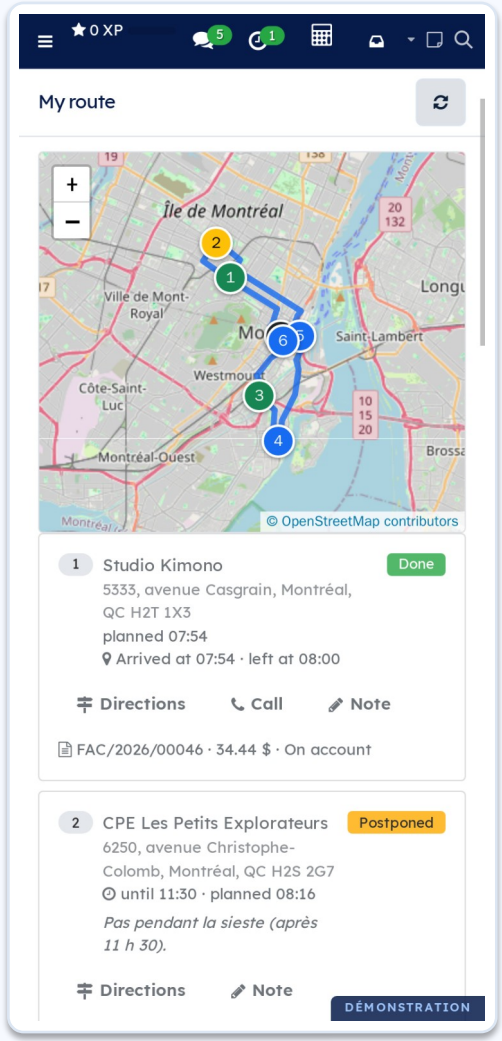

Numbered and coloured by status, from the depot back to base, with the actual road between them.

Directions, iPhone included

Apple Maps, Google Maps or Waze on an iPhone; any maps app on Android.

Customer locations, nothing more

No position is read from the phone to draw the map. The map background is yours to choose.

Mileage, no retyping

With sample data

Symbifox

The person's own car

A box on the vehicle says it is the employee's car: only their days give kilometres.

Two rates in the year

The full rate up to the 5,000 km threshold, then the reduced rate. A day that crosses it gives two lines.

A draft, nothing more

The expense carries the date, the odometer and the customers visited. The person adds it to their report.

My expenses: the 24 km day crosses the threshold, so two lines

The log and the travel time

With sample data

Symbifox

A log ready to print

One business trip per finished day: date, depot, purpose (the customers seen), kilometres and odometer.

Travel time logged

One time sheet line per finished day, from start to finish, on the project you choose.

Addresses located in-house

Customer coordinates are found with a map you host yourself: no address goes to an outside service.

					06:13

The trip log, and below it the hours logged

Sales on the road

Invoice at the stop, no retyping

Symbifox

The customer's price

Their price list, quantity breaks and taxes, estimated on the phone.

Deposits tracked

Each full container delivered is charged a deposit, each empty taken back is credited.

Payment as received

Cash, cheque, card on your own terminal or on account, with legal 5-cent cash rounding.

The truck counted

Loaded in the morning, unloaded on return: any gap is corrected with a note.

A sale is never refused

An unusual or archived product doesn't hold up the stop: the sale is kept “to finish”, and the office confirms it in one click.

The notice, before any position

What section 8.1 asks (Quebec's Law 25)

Symbifox

Off by default

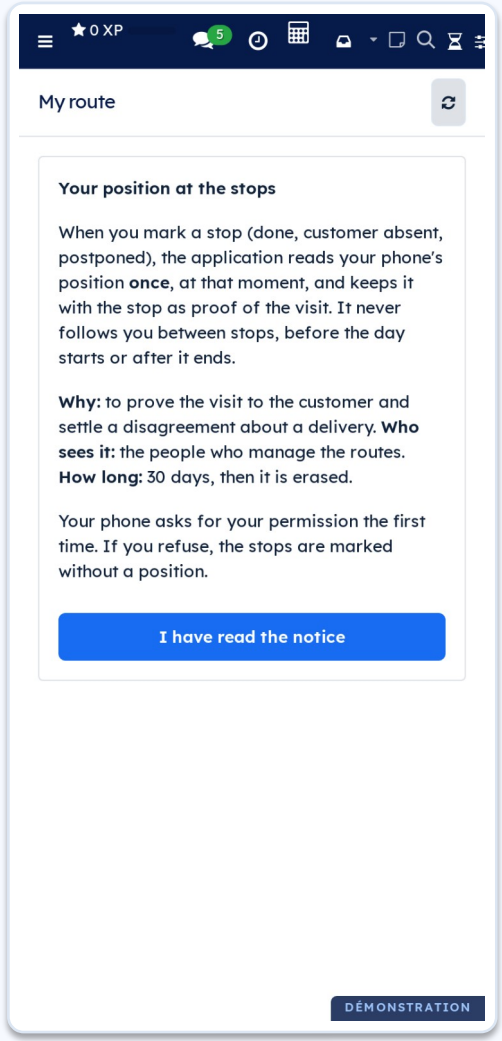

Positions at stops are turned on for the company, never behind anyone's back.

Read once, when marking

Never between stops, before the day starts or after it ends.

Erased when due

You set how long. A changed text or retention is read again before any position.

Everyone sees their share

Rights by role

Symbifox

By role

Office

Plans the routes, follows days and sales, sees positions if they are turned on.

On the road

Sees their own days and marks their stops. Never positions or other routes.

Responsible

Alerted when a route hasn't started or stops were missed.

Built-in protections

Checked writes

The phone changes nothing directly: every mark goes through a server check.

Engine on your side

OSRM and VROOM hosted by you: only coordinates are sent to them.

Marks never lost

A refused mark stays on the phone, and the office is told.

Full history

Every day keeps its marks, notes and state changes as they happen.

In short

1. **The right order, worked out**
   Time windows kept, no outside service
2. **Every visit proven**
   Arrival, departure, status and note, even with no signal
3. **Selling done at the stop**
   Invoice, deposits and payment, no retyping
4. **Mileage, no retyping**
   Draft expense, log and travel time
5. **Positions under your control**
   Off by default, announced, erased when due
